IMPLANT DIAMETER	TIP DIAMETER	ABUTMENT INTERFACE	PLATFORM DIAMETER	LENGTH

## BONETISSUE SURFACE TREATMENT.

The JDICON<sup>®</sup> Plus dental implant is available in two versions:

1. Full S.L.A surface treatment
2. H1.5 mm anodised implant collar and S.L.A surface treatment on the body and apical part.

The S.L.A. surface is produced using a large-grit sandblasting technique which gives the titanium surface a macro roughness. An acid-etching procedure produces a superimposed micro roughness.

**Note:** All dimensions are expressed in RA values.

S.E.M. picture shows the rugosity of the two different surface treatments.
